Guide 1, 15 minutes, 4 steps

A business unit's first AI model

From one task to a pilot you can measure. For the people who run a process, not for the people who train models.
This PDF is the printed version of an interactive guide. To run the experiments yourself: **halilneed.agency/guides/first-model/**

Step 1 of 4

Which task first?

Pick a task. The task card fills itself in.

Task card

Sort emails | Pull fields from invoices | Summarise requests | Approve credit applications

Input	An incoming customer email
Output	One of six categories
Examples	50 or more labelled emails per category
Measure of success	Share in the right category, per category
Human check	When the model is unsure, a person takes it

✓ Repeats often ✓ Easy to check ✓ Cheap to get wrong

✓ A good first task

⚠ A good first task repeats often, has an output you can check and is cheap to get wrong.

Step 2 of 4

One score hides the weak cases

Look at the overall score, then split it into slices.

94%

Overall accuracy

Overall score | Split into slices

The figures are illustrative. I took my own Turkish personal-data model from 0.740 to 0.882 this way, without training a bigger model.

Not a bigger model: targeted examples for the weak slices.

Step 3 of 4

Which level to start at?

Answer three questions and the starting level lights up.

Steps 3 and 4 are in the full guide

The full guide is on Gumroad as a PDF in English and Turkish. It is free; pay what you want if you like.

- ✓ Step 3 of 4: Which level to start at?
- ✓ Step 4 of 4: Shadow first, then assist
- ✓ The full guide as a PDF, English and Turkish

Steps 3 and 4 and the full PDF are free. To get them: **halilneed.gumroad.com/l/first-model**
